

# ActPak

## Brewed Compost Tea Activator

**For effective compost tea you need the right microbes—that's what ActPak triggers.**

Through a careful blend of seaweed extract, humic acid, mineral powder, and a variety of botanicals ActPak catalyzes a diverse mixture of microbes and sustains them while the tea is being applied to plants and the soil.

ActPak enhances compost tea by providing the maximum in the growth and diversity of biological agents. ActPak comes in an easy to use, staged set — one powder is added during brewing and another added just prior to application, springing the compost's microbes to life so that they will immediately go to work in the soil.

**ActPak is perfect for anyone wanting...**

- Optimal biological diversity in the soil
- Increased plant health
- A non-toxic compost tea enhancer
  - Improved soil wellbeing
  - An OMRI listed product for organic production

### Other Act Family fertility products available from Midwest Bio-Systems:

**Act N** — Introduces strong nitrogen fixing bacteria that work to make the soil's natural nitrogen available to plants so that synthetic nitrogen doesn't need to be added.

**Act Phos** — Releases nitrogen fixing, phosphorus solubilizing bacteria that break down the soil's phosphorus for plants to use.

**Act Foliar** — Is sprayed directly onto plant leaves to release yet another kind of robust nitrogen fixing bacteria to stimulate photosynthesis.
